

Search & AI Visibility Audit

Yorkshire Resin Drives

A plain-English review of how your website performs in Google, in AI answers, and in featured snippets — and exactly what we'll improve as we take it over.

SEO — GOOGLE SEARCH 7.5/10 349 pages indexed, clean structure, valid markup. A few technical signals to tidy.	GEO — AI ANSWERS 6.0/10 Good content, but the business "identity" signals AI engines rely on are thin or empty.	AEO — SNIPPETS 6.5/10 FAQ markup is in place; star-rating and breadcrumb rich results are being left on the table.
--	--	---

The short version. The inherited site is genuinely well built — a fast, modern platform with 349 pages covering every service across every town you work in. It already does a lot right, which is good news. What's holding it back isn't the build quality; it's a set of **missing signals** that tell Google and AI tools *who you are, where you are, and how well you're rated*. These are quick, high-leverage fixes. This report explains each one in plain English and lays out the order we'll tackle them in.

What SEO, GEO & AEO actually mean

SEO Search Engine Optimization Ranking in the normal Google results when someone searches "resin driveways Ilkley". The traditional game — titles, structure, content, technical health and local relevance.	GEO Generative Engine Optimization Being the company that ChatGPT, Gemini and Google's AI Overviews recommend when a customer asks an AI "who's a good resin driveway installer in Yorkshire?". Depends heavily on clear, machine-readable identity & trust signals.	AEO Answer Engine Optimization Winning the direct answer — the featured snippet box, the "People also ask" panel, the star ratings, and voice-assistant answers. Driven by FAQ, review and how-to structured data.
---	--	--

What's already working well

- **349 pages live and indexable** — a deep, well-organised structure covering every service across every town you cover. Excellent groundwork for local rankings.
- **Fast, modern platform** — built on Next.js and served from a global CDN, with images automatically optimised and resized for each device.
- **Web address tidiness is correct** — the plain and "www" versions, and http/https, all funnel to one address, so ranking strength isn't split.
- **Every page has its own title & description** — unique, keyword-relevant and well written, with the phone number included.
- **Clean page structure & image labels** — proper headings on every page and alt-text on all images (good for accessibility and image search).
- **Valid structured data in place** — Google can read your business, service and FAQ details. The FAQ page carries 15 marked-up questions; the blog is correctly tagged.
- **A real content library** — a 20-post blog including cost guides, which is exactly the kind of content AI answer engines like to quote.

What's holding the score back

HIGH

Your reviews aren't earning star ratings in Google

The reviews page lists genuine ratings (4.2–4.9★) as plain text, but there's no review structured data behind them. That means Google can't show gold stars next to your listing. **Fix: add Review & AggregateRating markup → eligible for star rich-results that lift click-through.**

HIGH

Your business "identity card" for AI is half-empty

The homepage business data has **no postal address, no map coordinates, no social links and no overall rating** — and the social-links field is literally empty. These are the exact signals ChatGPT, Gemini and Google's AI use to trust and recommend a local firm. **Fix: complete the LocalBusiness profile (NAP, geo, sameAs, aggregateRating).**

MED

No dedicated contact page

"Contact" links to a section on the homepage — there's no standalone contact page (the /contact address returns a "not found"). That's a missed page to rank for "Yorkshire Resin Drives contact / quote" and a weaker conversion path. **Fix: build a proper contact page with form, map, hours & NAP.**

MED

Your "preferred address" signal points to the wrong version

The canonical tags and sitemap reference the plain domain, but the site actually serves (and redirects to) the "www" version. It works, but it's a mixed signal that wastes a little crawl efficiency. **Fix: align canonicals & sitemap to the live www address.**

MED

Inconsistent contact email & missing share images

The page shows a personal *@gmail.com* address while the code references an *info@* domain email — pick one professional address. Separately, service & area pages have no social-share image, so links shared on Facebook/WhatsApp look bare. **Fix: standardise to a domain email; add share images per page.**

LOW

No breadcrumb or Organization markup; areaServed says "Yorkshire" only

Adding breadcrumb trails and an Organization profile strengthens entity recognition; the served-area is tagged only as "Yorkshire" though you also cover Cheshire / Greater Manchester. A couple of descriptions also run slightly long and get cut off in results. **Fix: add breadcrumbs, widen areaServed, trim long descriptions.**

What Innov8 Workflows will do

In priority order — highest-impact, lowest-effort wins first. Nothing here risks the rankings the site already has.

1

Switch your reviews into Google star ratings

AEO

Add Review + AggregateRating data so your 4.2–4.9★ feedback can show as gold stars in search — one of the biggest click-through wins available.

2

Complete your business "identity card" for AI & Maps

GEO

Fill in full address, map coordinates, opening hours, overall rating and your real social profiles so ChatGPT, Gemini and Google AI recognise and recommend you.

3

Build a proper contact / quote page

SEO

A dedicated, indexable page with form, map, hours and click-to-call — a stronger landing point for "get a quote" searches and ads.

4

Align the "preferred address" signals

SEO

Point every canonical tag and the sitemap at the live www address so Google crawls efficiently and consolidates all ranking strength.

5

Standardise contact details & add share images

SEO

One professional domain email everywhere, plus a branded preview image on every service & area page so shared links look the part.

6

Add breadcrumbs, Organization data & widen coverage

GEO

Strengthen how search engines understand your site's structure and that you serve Cheshire & Greater Manchester as well as Yorkshire.

7

Grow the answer-led content library

AEO

Expand the cost/how-to/FAQ content AI engines quote, targeting the exact questions your customers ask before they buy.

Ready to take this site to a 9.5?

Most of the above is a matter of days, not months — and the foundation is already strong.
Let's get the quick wins live first and watch the visibility climb.

LET'S TALK

Not assessed in this review

Honest scope: this audit covers everything verifiable from the live pages. The items below need live testing tools or account access — we'll baseline these once we take ownership.

- Live Core Web Vitals / Google PageSpeed scores
- Google Business Profile / Maps presence & reviews
- Search Console indexation & crawl errors
- Current Google keyword rankings & positions
- Backlink profile & domain authority
- Organic traffic & conversion analytics

Scores reflect only what is verifiable from the live website on 25 June 2026. They are a directional baseline, not a guarantee of ranking positions. Prepared by Innov8 Workflows.
